Allowable Subject Matter

Claims 1-14 are allowed. The following is an examiner's statement of reasons for allowance:

Claims 1-14 are allowed because a comprehensive search of prior art failed to teach, as applicant has, applying pulse position modulation wherein the first amplitude level is used as a reference amplitude level and based on that the two pulses "I1" and "I2" are obtained in such a way that the polarities of these two pulses are opposite of each other in the same pattern.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Freshteh N. Aghdam whose telephone number is (571) 272-6037. The examiner can normally be reached on Monday through Friday 9:00-5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on (571) 272-3021. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

DETAILED ACTION

Claim Objections

Claims 1, 4, and 7 objected to because of the following informalities:

As to claim 1, there is no antecedent basis for the expression "the first amplitude level (B)".

As to claim 4, there is no antecedent basis for the expression "the start of frame (SOF)".

As to claim 7, there is no antecedent basis for the expression "the End of Frame (EOF)".

Appropriate correction is required.

Allowable Subject Matter

Claims 1-14 would be allowable if rewritten or amended to overcome the objections set forth in this office action.

The following is a statement of reasons for the indication of allowable subject matter:

Hicks et al U.S. Patent 5,844,942 provides a method for modulating a radio signal using pulse position modulation. On the other hand, Takayama et al US Patent 4,225,888 applies the ternary AM-PM modulation to transmit a waveform. However, the prior art of record fails to disclose applying pulse position modulation wherein the first amplitude level is used as a reference amplitude level and based on that the two pulses

"I1" and "I2" are constructed in such a way that the polarities of these two pulses are opposite of each other in the same pattern.

Conclusion

This application is in condition for allowance except for the formal matters described above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
